

UNIVERSITY OF THE PACIFIC
MSBA 265: Special Analytics Topics — Fall 2026
Project Replication & Peer Verification Form

Project Submitter Name: _____

Peer Reviewer / Approver Name: _____

Assignment / Module Number: _____

Date of Verification: _____

WARNING & REPLICATION POLICY

BEFORE SUBMISSION: You must send your Git repository to a classmate. They must run your entire codebase by following your instructions explicitly **WITHOUT YOUR HELP**.

If they run into errors, you must resolve and fix them before your final submission. Failure to provide reproducible instructions and code will result in a **10-point deduction from BOTH the submitter and the peer approver** for each failed attempt the instructor experiences upon review of broken workflows.

PEER REVIEWER VERIFICATION CHECKLIST

The peer reviewer must independently verify and initial each item below before signing.

- ☐ I have cloned/pulled the submitter's Git repository branch to my local environment independently.
- ☐ I followed the setup, dependency installation, and execution steps provided in the repository's README.md file without receiving any personal help or verbal guidance from the submitter.
- ☐ The code compiled and executed successfully with zero runtime errors, replicating the expected data science project outputs perfectly on my computer.

By signing below, both parties certify that the peer replication process was executed with absolute integrity, without verbal assistance, and meets the course compliance standard.
